

### BASIC SET UP

All files to be finished as a precision cut are to be set up as follows:

- Dielines must be on a single separate layer
- A separate layer must be in your files that includes the precise dieline mapping, the position and contour of the finished cut relative to the artwork. Nothing else should be on this layer
- This separate layer must be created as "vector" art as a 1 pt. rule. The program ideally suited for this task is Adobe Illustrator
- Score lines and cut lines need to be different colors. No dashed or dotted lines, only solid 1 pt. lines

Files received that do not follow these guidelines can be corrected prior to production by Gigantic Color. The cost to correct files is \$100.00 per hour and will be estimated to the client prior to commencement of work.
